

DOD 4036-6/

COPY 1 OF 1

June 26, 1961

Dear Charley:

With the increased and more complex demands on precise control of film processing that are coming in connection with O, and more recently M, it seems to me that we must increase our capability along these lines. All of these years we have been limping along with the simpler routine laboratory instruments such as the Model 101 Sensitometer and the Model RT Densitometer.

25X1A

I now propose that we obtain:

1. Sensitometer Model 1B	Est. Cost	[Redacted]
2. Sensitometric processor	Est. Cost	
3. Microdensitometer	Est. Cost	
4. Color densitometer 31A (not to be used for color)	Est. Cost	
	Est. Cost	[Redacted]
	G & A 8.8%	

[Redacted]
Est. Total Cost

25X1A

I suggest that these be put against EG-400 as part of the laboratory equipment required for O.
